

Clinical Support Division

Nutrition Management Information System (NMIS)

What It Is...

NMIS is a production and clinical information system that supports nutrition management operations at the Department of Defense's (DoD) military treatment facilities (MTF) worldwide. It allows dietetic personnel in the DoD Military Health System to provide preventative and therapeutic medical nutrition therapy, and medical food management to service members and beneficiaries.

Key Features and Benefits

- Robust patient dietary module
- Flexible food operations module
- Interfaces with the electronic health record and Prime Vendor (also planned interface with point of sale)
- This AIS supports every beneficiary that visits or is a remain-over-night inpatient of a DoD MTF

Key Capabilities:

- Items
- Recipes
- Nutrient Database
- Menus
- Room Service

Highlights

- Deployed the Computrition Pending Diet Orders (PDO) Module to all NMIS sites in Q3 of FY12. The PDO module was developed especially for advancing and automating the process of diet order entry for a patient's future meals.
- Upcoming technical refresh to will enable PKI and User Based Enforcement which will eliminate usernames and passwords. The system will also become Internet Protocol version 6 (IPV6) compatible.

What Users Are Saying...

“Can quickly dig into a menu, to recipe, to ingredient details and verify accuracy of info or edit.”

“Very Quick!”

“...sessions were excellent because they showed in a live Web-based manner how to do it. Once I used they system to build the menu and recipes, it was easy.”

“It’s excellent!”
